  76%

2012- 2013

- **10th**
  St Mary's Convent School, Kareli
  72%

PROJECTS

- **Project: Labrador**
  - https://business15.web.app/
  - Labrador AI operates as a Point of Sale (POS) online system specifically designed for restaurants, encompassing up to seven individual stores.
  - In this project, Python is used for the backend, and MySql for the database.
  - In the front end, we have utilized Angular. This project is compatible with both Angular 7 and the updated version, Angular 15.
  - To deploy the project, we follow a four-step process. First, we work on it locally, then move it to the staging (QA) environment. After that, we deploy it to the pre-production environment, and finally, to the production environment.

- **Project: Advocate Website**
  - Frontend Development: -
    - Utilized React.js to create an interactive and user-friendly dashboard for both users and administrators.
    - Implemented responsive design principles to ensure seamless navigation across various devices.
  - Backend Development:-
    - Developed a robust backend using Laravel, ensuring efficient data processing and management.
    - Integrated MySQL database to store and retrieve data, maintaining data integrity and security.
  - API Integration:- Successfully integrated APIs to fetch and display real-time data for court cases, bank recovery, and motor insurance, enhancing the dashboard's functionality.
  - Data Visualization: - Incorporated Pie Charts and Bar Graphs to visually represent complex data, providing a clear and concise overview of bank recovery and motor insurance statistics.
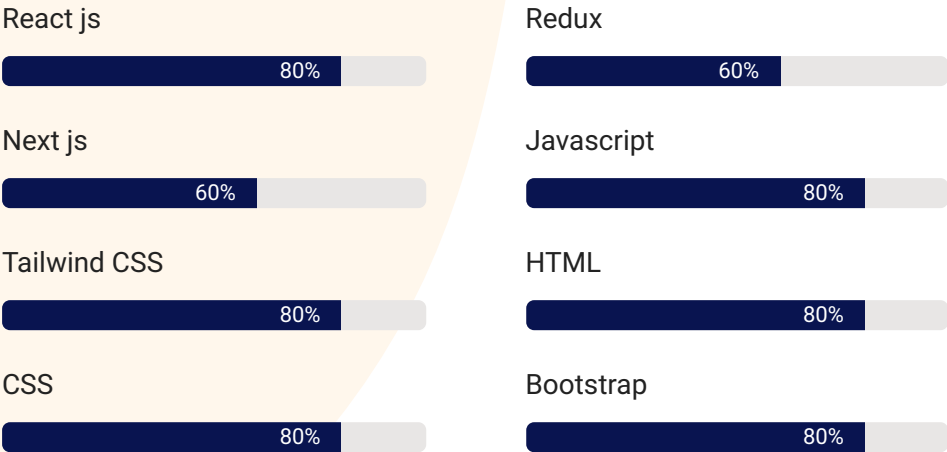

- **Project: Halal Traks**
  - Developed a dynamic and responsive website utilizing HTML, CSS, and JavaScript to showcase diverse project categories, including fashion, business, food, stay, and tours.
  - Implemented a robust backend system using Laravel, ensuring seamless data management and efficient retrieval from the MySQL Database.
  - Designed an intuitive user interface to enhance the user experience, allowing easy navigation and exploration of the various halal track projects.

- **Project: Minutieux Screening Integration**
  - Technology Stack: - Implemented a robust business customer data management website using cutting-edge technologies, including React.js for the dynamic front-end, Python for the backend logic, and MongoDB for efficient data storage.
  - User Interface Design:- Designed and developed an intuitive user interface that enhances user experience, ensuring easy navigation and seamless interaction with the application. Employed React.js to create a responsive and visually appealing design.
